

**LATISSE®** (bimatoprost ophthalmic solution) 0.03% is a prescription treatment for hypotrichosis used to grow eyelashes, making them longer, thicker, and darker.

Eyelash hypotrichosis is another name for having inadequate or not enough eyelashes.

### **Important Safety Information**

If you are using, or have used, prescription products for any eye pressure problems, only use **LATISSE®** under close doctor care.

**LATISSE®** use may cause increased brown pigmentation of the colored part of the eye, which is likely permanent.

Eyelid skin darkening may occur, which may be reversible.

**Only apply at the base of the upper eyelashes. DO NOT APPLY** to the lower eyelid. Hair growth may occur in other skin areas that **LATISSE®** solution frequently touches.

If you develop or experience any eye problems or have eye surgery, consult your doctor immediately about continued use of **LATISSE®**.

The most common side effects after using **LATISSE®** solution are itchy eyes and/or eye redness.

If discontinued, lashes will gradually return to their previous appearance.

**Full Prescribing Information has been provided to your doctor, or you can [click here](#).**

Actual **LATISSE®** patient without mascara—lashes not retouched.

### **Individual results may vary.**

If you stop using **LATISSE®**, your eyelashes are expected to return to their previous appearance over several weeks to months.

It is possible for a difference in eyelash length, thickness, fullness, pigmentation (darkness), number of eyelash hairs, and/or direction of eyelash growth to occur between eyes (eg, results may vary for each eye). These differences, should they occur, will usually go away if you stop using **LATISSE®**.
